SOFTWARE ENGINEER / JOHANNESBURG, SOUTH AFRICA

Tumelo Phale

.NET · TYPESCRIPT · APPLICATION QUALITY

tumelojuniorphale@gmail.com · github.com/tumelodev-arch · LinkedIn

PROFILE

Software engineer with professional experience across C#/.NET backends and Angular/TypeScript frontends. Experience includes application features, validation and business rules, CQRS-based applications, automated testing, defect investigation, security review exercises and delivery workflows. Developing deeper capability in cloud systems and service reliability.

PROFESSIONAL EXPERIENCE

Graduate Software Engineer

- Develop and support .NET application features, request handling and business-rule validation.
- Investigate defects by reproducing behaviour, tracing relevant paths, reviewing evidence and checking fixes.
- Use automated, negative-path and regression testing to make expected behaviour explicit.
- Work with pull requests, review feedback, CI troubleshooting and delivery workflows.
- Build cloud knowledge through AWS exposure and distributed-system troubleshooting exercises.

SELECTED PERSONAL WORK

Randwise Local-first cash-flow planner with monthly summaries, category breakdowns and CSV export.

Incident Atlas Incident review workspace for severity, impact, response notes, resolution states and JSON export.

Decision Archive Architecture decision records with lifecycle statuses, Markdown export and JSON backup/restore.

All three are independent browser-based practice applications using local storage. They have no backend, accounts or cloud sync. Use synthetic or non-sensitive data.

TECHNICAL FOUNDATION

Application development	C#, .NET, ASP.NET Core, Angular, TypeScript, JavaScript, REST APIs, SQL and CQRS-based patterns.
Testing and investigation	Unit testing, validation tests, negative testing, regression checks, Cypress E2E, defect reproduction and debugging.
Delivery	Git, pull requests, code review, CI troubleshooting, feature flags, environment verification and technical documentation.
Cloud exposure	AWS ECS, Fargate, EC2, DynamoDB, load balancers and CloudWatch, including troubleshooting exercises.

SECURITY AND RELIABILITY LEARNING

Security review exercises have included SSRF, CSV formula injection, authorisation assumptions and password-storage assessment. Reliability learning includes service routing, task failures, health checks and deployment behaviour.

EDUCATION AND CREDENTIALS

BSc Information Technology
North-West University, 2024

Additional credentials
Sage Business Cloud Payroll Certified Consultant (SBCPASA)
Sage Africa Payroll Principles Training (SAGT)
