PROFILE

Graduate Software Engineer at Sage, developing full-stack features for a multi-country payroll platform. Experience includes CQRS refactoring, Cypress E2E testing, localization, and CI/CD validation. Currently learning AWS fundamentals.

EXPERIENCE

Graduate Software Engineer Oct 2025 to present
Sage

- Develop full-stack changes for a multi-country payroll platform using C#/.NET and Angular/TypeScript.
- Refactored backend controllers around CQRS command and query boundaries.
- Delivered tax-domain and payment-related fixes from investigation through implementation, testing, and deployment verification.
- Built Cypress end-to-end specs aligned with formal test plans and corrected locale-specific text and validation.
- Validated changes in per-PR ephemeral environments using Azure DevOps pipelines and investigated pipeline-stage failures.

SELECTED TECHNICAL WORK

AWS learning exercise

- Explored ECS task memory, Fargate and load balancing scenarios.
- Currently learning AWS fundamentals.

Multi-agent system design challenge

- Defined coordinator and specialist roles, responsibilities, and tool access.

TECHNICAL TOOLKIT

Languages: C#, TypeScript, JavaScript, SQL, Bash, PowerShell
Application: .NET, REST APIs, CQRS, Angular, reactive forms, localization
Testing and delivery: Cypress, Vitest, unit testing, Azure DevOps Pipelines, Git
AWS learning: Studying AWS fundamentals and exploring ECS, Fargate, EC2, and load balancing
AI systems: Bedrock AgentCore, multi-agent design, agent orchestration

EDUCATION

BSc Information Technology 2024
North-West University
